

# O<sup>1</sup> VoiceStream FXS

## Smart, Powerful and Cost-Effective

O<sup>1</sup>'s VoiceStream enables enterprises to benefit from value-added IP telephony services. This solution works by linking the customer's existing premise-based equipment to a single Integrated Access Device (IAD). The IAD connects the access line to both the customer's voice equipment and O<sup>1</sup>'s network. Outgoing calls are routed through the premise-based equipment and out via the IAD. From this point, the IP call is then routed over a QoS-enabled T1. When the voice channel is idle, that bandwidth is made available for data transactions.

### Features

- From 5 up to 23 lines\*
- Direct Internet Access up to 4.5Mbps\*
- Up to 23 telephone numbers (depending on number of lines ordered)
- O<sup>1</sup> managed Integrated Access Device
- Voice re-route to backup telephone number
- 5 toll free numbers
- 4 foreign exchange telephone numbers
- 1 Basic white page listing
- Free inter-office calling among multiple locations
- Up to 8 IP addresses (5 usable)
- Standard phone features:
  - Line hunting
  - Caller ID
  - 3-way calling
  - Last number redial
  - Call transfer
  - Speed calling
- Web hosting:
  - 50M storage
  - 50 GB transfer
  - 1 Domain name
  - 50 Email addresses

\* Requires bonded circuit

### Benefits

- Unlimited local and IntraLATA calls
- Works with your existing phone equipment
- Prioritized voice traffic for voice quality, QoS
- Voice re-routing in event of loop/customer premise equipment failure
- No charge to port over existing numbers
- Business-class Service Level Agreements
- Long distance rate plans starting at a minimum of 1000 minutes per bundle
- 24 x 7 dedicated support
- MPLS optional add-on
