

O¹ VoiceStream PRI / SuperTrunk

Smart, Powerful and Cost-Effective

O¹'s VoiceStream PRI enables enterprises to benefit from value-added IP telephony services. This product works by linking the customer's premise-based equipment to a single Integrated Access Device (IAD), which connects the access line to both the customer voice equipment and O¹'s network. Outgoing calls are routed through the premise-based equipment and out via the IAD. From this point, the IP call is then routed over a QoS-enabled T1. When the voice channel is idle, that bandwidth is made available for data transactions.

Features

- From 5 up to 23 voice paths*
- Supports PRI or SuperTrunk T1
- Direct Internet Access up to 4.5Mbps*
- Up to 100 DID's
- O¹ Managed Integrated Access Device
- Voice reroute to backup main telephone number
- 5 toll free numbers
- 4 foreign exchange DID's
- Up to 8 IP addresses (5 usable)
- 1 Basic white page listing
- Free inter-office calling among multiple locations
- Web hosting
 - 50M storage
 - 50 GB transfer
 - 1 Domain name
 - 50 Email addresses

* Requires bonded circuits

Benefits

- Unlimited local and IntraLATA calls
- Dynamic bandwidth management eliminates the need to maintain separate lines for voice and data
- Works with your existing phone equipment
- Supports DID's to PBX T1 card
- Prioritized voice traffic for voice quality
- Voice re-routing in event of loop/customer premise equipment failure
- Business-class Service Level Agreements
- Long distance rate plans starting at a minimum of 1000 minutes per bundle
- 24 x 7 dedicated support
- MPLS optional add-on
