

O¹ Backup & Recovery

Fast Recovery from Data Loss and Server Outages

A backup is only as good as the speed and reliability of the recovery. However, many businesses don't consider the weaknesses of their current system until it is too late. Using O¹'s Axcient solution, lost data is restored in minutes down to the file and folder level with a simple click. Axcient can even restore crashed servers.

O¹'s Axcient solution is built on a software-plus-hardware-as-a-service-model developed specifically for small and medium businesses. There is no software to install and Axcient supports remote, centralized administration of your entire user base without changing router or firewall rules. Axcient delivers extreme ease of use, affordability and complete data protection.

How it Works

Axcient is a disk-based appliance with optional RAID-5 redundancy. Using your internal wide area network (WAN), O¹'s Axcient solution backs up desktops and servers at frequencies specified by you. Once data is consolidated on the Axcient appliance, it is securely transferred and safely stored at the Class A data center where it is available 24x7 for immediate retrieval. Backups to the data center occur automatically at user specified intervals.

Features

- Monthly subscription with no up-front costs
- Onsite and online backup in one device
- Easy to install and intuitive to use, setup takes less than 30 minutes
- Fully automated backup eliminates guesswork or manual processes
- VPN IPSec transfer protocol offers the most secure data transport method and is HIPPA and SOX compliant
- Customized "Snapshots" allow users to setup automatic daily, weekly, monthly, or annual reports and keep multiple versions of files to meet compliance needs
- Ultrafast backups and restores using bit-level transfer technology
- 24x7x365 access to data recovery
- Simple drag-and-drop restores
- Email notification upon successful backup completion
- Cost-effective data protection solution
