**o1 COMMUNICATIONS INCREASES ISP PARTNERS' REACH, PROVIDES  
GREATER SELECTION OF BROADBAND ACCESS TECHNOLOGIES**

SACRAMENTO, Calif., October 21, 2003 -- o1 Communications, Inc., a leading provider of next-generation data telecom services to Internet Service Providers (ISPs), today announced it is expanding its ISP partners' nationwide reach, at no additional cost to them. o1 will deliver high performance broadband services - high performance asynchronous transfer mode (ATM), digital subscriber line (DSL), and "frame relay" access to its ISP partners. These enhanced services are a result of an agreement between o1 and New Edge Networks, a national broadband and data communications company. o1 Communications is greatly expanding its reach while seamlessly enhancing its commitment to deliver industry-leading performance.

"Our ISP partners benefit from this new relationship," said Max Seely, Vice President of o1 Communications. "Because o1 is aggregating and paying the recurring expenses to access New Edge Networks' gateway, our ISP partners are able to provision circuits for their customers without additional network costs or minimum commitment levels."

"o1 Communications is dedicated to providing our partners with the most reliable and highest performance access solutions available, and because we are expanding our access technology offerings, our partners have more choices with enhanced quality," said Mr. Seely.

(MORE)

"This relationship helps o1 Communications ensure that its ISP partners receive top-notch service and reliable access, regardless of where they are located," said Dan Moffat, President and CEO of New Edge Networks. "We guarantee high performance communications with service level commitments that are among the industry's strongest.

**About o1 Communications, Inc.**
